The Honorable Sam Graves
Ranking Member
Committee on Transportation &
Infrastructure
U.S. House of Representatives
Washington, D.C. 20515

RE: OPPOSING THE SAFE AIRCRAFT MAINTENANCE STANDARDS ACT (H.R. 7321)

Dear Chairman DeFazio and Ranking Member Graves:

The undersigned organizations representing commercial and general aviation maintainers, manufacturers, operators and service providers oppose the Safe Aircraft Maintenance Standards Act (SAMSA) (H.R. 7321).

The legislation, as introduced, would threaten U.S. jobs, hurt small businesses, disrupt international air travel, and weaken the competitiveness of the U.S. aerospace industry. SAMSA would also add to the Federal Aviation Administration's (FAA) workload without providing additional oversight resources, thereby distracting the agency from more pressing safety matters.

This legislation is unnecessary given existing federal regulations and the scrutiny repair stations already receive from U.S. regulators, customers, and third-party accrediting bodies. While we agree that the Federal Aviation Administration (FAA) should complete the congressionally mandated drug and alcohol testing rulemaking consistent with our international obligations, we disagree that the industry, which has no control over the federal rulemaking process, should be punished for the missed deadline as outlined in Section 4 of the bill.

The bill mandates onerous new record keeping and reporting requirements that do nothing to help focus regulators on safety critical information and will simply overwhelm them with irrelevant data. It puts in place regulatory requirements that would be likely impossible to implement. Further, it threatens the cooperation with other international aviation authorities (including key bilateral aviation safety partners) that is so vital to improving aviation safety.

If the legislation becomes law, the status of repair station certificates outside the United States will be threatened. U.S. passenger and cargo airlines and general aviation operators that rely on FAA-certificated facilities around the globe will be unable to get their aircraft serviced at foreign destinations. U.S. manufacturers and maintainers wishing to establish overseas facilities to support customers in the global marketplace would be severely limited from doing so. And the hundreds of U.S. small and large repair businesses that hold foreign maintenance approvals and perform work on other countries'

aircraft (and thousands of workers they employ) would likely lose approval from foreign aviation authorities to conduct such work, resulting in the loss of international customers and U.S. jobs.

For all the foregoing reasons, we oppose SAMSA and urge that the committee take no action on it.

Thank you for your consideration.

Sincerely,
